

Maw — Loot Tables

When a monster dies, it can drop an item. Every item has a rarity, from Common up to Celestial. This guide shows exactly how likely each one is, and what decides it.

The eight rarities

Worst at the top, best at the bottom. Better items carry more enchants, and those enchants roll closer to the ceiling.

rarity	enchants	enchant strength	item power	what else you get
Common	none	—	60%–100%	
Uncommon	1	40%–100%	60%–100%	1 enchant
Rare	2	40%–100%	60%–100%	2 enchants
Epic	3	40%–100%	60%–100%	3 enchants
Ancient	3	100%–125%	100%–120%	stronger ceil power
Primordial	3	125%	120%	perfect roll
Legendary	3	80%–100%	80%–100%	legendary affix
Celestial	3	125%	120%	perfect roll, legendary affix, and it grows with you

Enchant strength is how big each enchant's number is, as a share of the ceiling for that loot tier (the ceiling is in the next section). **Item power** is the item's own level, which sets its base numbers such as a weapon's damage and its level requirement. It starts from the level of the monster that dropped it (one point per 5 levels, up to 100) and the rarity takes its share of that.

A **special enchant** is one of the named item properties (of Dragon Slaying, of Regeneration, and so on). Everything from Epic upward has one.

Careful: a Legendary rolls *weaker* enchants and *less* item power than an Ancient. That is

on purpose. A Legendary pays you back with its affix instead.

A **Celestial** is a Primordial that also carries a legendary affix. On top of that it has no level requirement, and its enchants and item power are computed from *your* level rather than from the monster that dropped it, so it never falls behind.

Loot tier: the number that decides everything

One number controls how good a drop can be. We call it the **loot tier**. It is the sum of three parts.

1. The monster's level. Every 15 levels of the monster's level — the level Maw scales it to, not the base game one — is one tier. The remainder is rolled as a chance. A level 100 monster gives 6 tiers, plus a 67% chance of a seventh.

monster level	15	30	45	60	90	120	150	210	300
tiers from level	1	2	3	4	6	8	10	14	20

2. The monster's item grade. Every monster type carries items of a grade from 1 to 6. The grade comes from the monster's *base game* level, not from the level Maw scales it to: a goblin scaled to level 300 is still a goblin and still carries grade 1 items. Each monster type comes in three versions, and the stronger versions carry a better grade: take the base level of the middle version, add 10, 20 or 30 for the weak, middle and strong version, and divide by 20. A dragon whose middle version is base level 90 carries grade 6 in its strongest version; a monster at base level 20 carries grade 2 in its middle version. Weak monsters placed in a strong map use the map's own level instead of theirs.

Bosses are different: their grade starts at 2 and adds one per 20 levels of the monster they were made from. In practice a boss is grade 6 on nearly every map.

3. Extras. A boss adds 1 tier. An Omnipotent monster adds 1 more. Map affixes add tiers on top: none up to map power 28, then one tier for every 2 points of power above that (power 30 gives +1, power 50 gives +11). The Arena adds 20 tiers to everything that drops there.

So the short version is: **kill stronger monsters and you get better loot**. A grade 3 monster at level 90 drops at tier 9. A boss at level 150 drops at tier 17. Anything at level 285 or more drops at tier 20 or higher, whatever its grade.

Your own level does not count. Only the monster's. A level 300 character farming level 40 monsters gets level 40 loot. The only exception is shops, which price and roll their stock off your own level.

Tier 20 is the ceiling for rarity

The rarity odds stop changing at tier 20: every table below ends there, and tier 35 drops

exactly the same rarities as tier 20.

All three bands (Epic, Rare, Uncommon) reach their cap together at tier 20, so every column moves one way only as the tier climbs: the good ones up, Common down.

What keeps growing past tier 20 is the enchant strength ceiling, up to tier 37:

loot tier	0	4	8	12	16	20	25	30	37+
enchant ceiling	1	9	17	25	37	49	64	79	100

The ceiling is what a perfect Epic enchant rolls (100%). An Ancient rolls up to 125% of it, so at tier 20 an Ancient enchant reaches 61, an Epic at best 49. Difficulty multiplies the ceiling as well: Nightmare by 1.05, Doom by 1.1, Road to Insanity and Beyond Madness by 1.2.

How to read the tables

Each row is one dropped item. Read across and the numbers add up to 100%.

The last column, **Ancient+**, is the one most players care about. It means Ancient, Primordial, Legendary or Celestial — any of the four best rarities.

The numbers assume a map without affixes. They are long-run averages: the bad luck protection is already counted in them, as explained at the end.

There are seven difficulties. Easy and Normal roll the same table as MAW. Hard, Hell and Nightmare are the bolster settings above it; Doom, Road to Insanity and Beyond Madness are the game modes.

MAW — Regular monsters

bolster 100. Easy and Normal (the starting setting) roll exactly the same table.

loot tier	Common	Uncommon	Rare	Epic	Ancient	Primordial	Legendary
0	40.0%	40.0%	15.0%	4.30%	0.43%	0.15%	0.11%

20+	—	—	—	38.7%	35.8%	13.2%	11.4%

At tier 20 and up: **1 in 2** drops is Ancient or better. A Celestial is 1 in 120.

All difficulties side by side

At loot tier 20 and above:

difficulty		Common	Uncommon or better	Rare or better	Epic or better	Ancient+	Celes
MAW	regular	20.0%	80.0%	60.0%	20.0%	3.66%	0.041

Difficulty	Category	Common	Uncommon	Rare	Epic	Ancient	Drop Rate
MAW	bosses	—	100.0%	100.0%	80.0%	27.6%	0.33%
Hard	regular	14.9%	85.1%	64.2%	22.4%	4.48%	0.050
Hard	bosses	—	100.0%	100.0%	89.6%	33.5%	0.40%
Hell	regular	12.2%	87.8%	68.3%	24.4%	5.29%	0.060
Hell	bosses	—	100.0%	100.0%	97.6%	39.4%	0.48%
Nightmare	regular	10.3%	89.7%	71.1%	25.8%	6.44%	0.074
Nightmare	bosses	—	100.0%	100.0%	100.0%	46.0%	0.57%
Doom	regular	8.93%	91.1%	73.2%	26.8%	7.56%	0.087
Doom	bosses	—	100.0%	100.0%	100.0%	51.3%	0.65%
Road to Insanity	regular	7.58%	92.4%	75.8%	30.3%	9.51%	0.11%
Road to Insanity	bosses	—	100.0%	100.0%	100.0%	56.4%	0.73%
Beyond Madness	regular	6.37%	93.6%	78.3%	35.0%	12.1%	0.14%
Beyond Madness	bosses	—	100.0%	100.0%	100.0%	61.3%	0.81%

"Uncommon or better" is simply everything that is not a Common — that is, every drop that carries at least one enchant. At these tiers a boss is always at least Rare.

Moving from MAW to Beyond Madness gives you about **3.3 times** as many Ancient or better items from regular monsters, and **2.2 times** as many from bosses.

Bosses

Counted in Ancient or better items at tier 20, one boss drop is worth between **5.1 and 7.5 regular drops**, depending on the difficulty: the gap is widest on MAW and narrowest on Beyond Madness, where regular monsters have caught up. Three things make it happen.

A boss only rolls the top quarter of the table. Its roll is squeezed into the best 25% of the rarity table, so it never drops a Common. Uncommons only survive at the very first tiers on MAW (up to tier 2) and Hard (tier 0), never on Hell or above. Rares fade out as the tier climbs: from tier 19 on Nightmare, 18 on Doom, 14 on Road to Insanity, 10 on Beyond Madness a boss is always at least an Epic. The other three never quite lose it — at tier 20 a boss still drops a Rare 20.0% on MAW, 10.4% on Hard and 2.44% on Hell.

A boss has double the chance at the top four rarities. Once the item is an Epic, the roll that decides how far up the ladder it climbs runs at twice the rate.

A grade 6 boss drop takes its special enchant from the strongest pool only. Regular monsters mix the three pools.

What the tables leave out

Map affixes. They add loot tiers, as described above, and they also multiply the chance at the top four rarities: every affix on the map adds $(\text{power} + 20) / 400$ to the multiplier. Four affixes at map power 30 give $\times\{\text{affix_mult}(30):.2f\}$; at power 50, $\times\{\text{affix_mult}(50):.2f\}$; at power 80 the chance has doubled.

Bad luck protection. Three rarities have it: Primordial, Legendary and Celestial. Ancient does not. Each one keeps a counter that goes up every time a drop reached the Epic band and that rarity failed to come out, and resets to zero when it does. Drops that ended as Common, Uncommon or Rare never touch it.

Right after you find one, the chance is far *below* the printed number: about $\{\text{dip}['\text{Legendary}']:.0\% \}$ of it for a Legendary, $\{\text{dip}['\text{Primordial}']:.0\% \}$ for a Primordial, $\{\text{dip}['\text{Celestial}']:.0\% \}$ for a Celestial. It then climbs with every failure until it becomes a certainty — after $\{\text{guar}['\text{Legendary}']\}$ failed Epic-band rolls for a Legendary, $\{\text{guar}['\text{Primordial}']\}$ for a Primordial and $\{\text{guar}['\text{Celestial}']\}$ for a Celestial on MAW. The counter fills faster on higher difficulties and on bosses, so those numbers shrink there (down to $\{\text{guar_fast}['\text{Legendary}']\}$, $\{\text{guar_fast}['\text{Primordial}']\}$ and $\{\text{guar_fast}['\text{Celestial}']\}$ for a boss on Beyond Madness).

The tables show the long-run average of that cycle, which lands within a few percent of the flat chance. What the protection really changes is the spacing: fewer long droughts, fewer lucky streaks.

Special cases

Omnipotent monsters always drop a Celestial.

Austerity mode has no Legendary and no Celestial, and its enchant ceiling is far lower: at tier 20 it is $\{\text{enc_str_up_austerity}(20)\}$ instead of $\{\text{enc_str_up}(20)\}$.

Shops never sell a Primordial, a Legendary or a Celestial. A shop Ancient is rarer than a dropped one — it rolls at $\{\text{rarityUpgradeChance}[\text{PRIMORDIAL}]:.0\% \}$ of the Epic rolls instead of $\{\text{rarityUpgradeChance}[\text{ANCIENT}]:.0\% \}$ — and has no bad luck protection.

The Arena counts as 20 loot tiers higher than the monsters in it.

Legendary affixes are not drawn evenly: the affixes you have found less often are more
