

Maw — Loot Tables

When a monster dies, it can drop an item. Every item has a rarity, from Common up to Celestial. This guide shows exactly how likely each one is.

The eight rarities

Worst at the top, best at the bottom. Better items carry more enchants, and those enchants are stronger.

rarity	how many enchants	how strong they are	item power	what else you get
Common	none	—	60%–100%	
Uncommon	1	40%–100%	60%–100%	
Rare	2	40%–100%	60%–100%	
Epic	3	40%–100%	60%–100%	a special enchant
Ancient	3	100%–125%	100%–120%	Ancient grade I
Primordial	3	125%	120%	Ancient grade II
Legendary	3	80%–100%	80%–100%	a legendary affix
Celestial	3	125%	120%	Ancient grade II, and it is celestial

The percentages are how much of the maximum the item rolled. Enchant strength is how big the bonus is. Item power is how much the item's own stats are boosted. Both maximums grow as the loot tier goes up.

Careful: a Legendary rolls *weaker* enchants than an Ancient. That is on purpose. A Legendary pays you back with its affix instead.

Loot tier: the number that decides everything

One number controls how good a drop can be. We call it the **loot tier**. The higher it is, the better the item can turn out.

Two things build it up, and both are about the monster you just killed.

First, how tough the monster is. A tougher monster carries a better grade of item. You gain one grade about every 20 monster levels. This stops at 6.

Second, the monster's level counts again. Every 13.5 levels adds one more tier. This part never stops growing.

So the short version is: **kill stronger monsters and you get better loot.**

Here is what that looks like:

monster level	10	20	40	60	80	100	150	200	300
loot tier	1	3	5	8	10	13	17	20	28

Up to about monster level 110 you gain one loot tier every 8 levels or so. After that the grade has stopped at 6, so you gain one tier every 13.5 levels.

Your own level does not count here. Only the monster's. A level 300 character farming level 40 monsters gets level 40 loot.

There is a third, smaller source: **map affixes**. An affixed map adds a few tiers on top, and it is the one part you choose yourself. Bosses add 1 tier, and Omnipotent monsters add 1 more.

The tables below stop at tier 30. Past that nothing changes — tier 45 drops exactly like tier 30.

How to read the tables

Each row is one dropped item. Read across and the numbers add up to 100%.

The last column, **Ancient+**, is the one most players care about. It means Ancient, Primordial, Legendary or Celestial — any of the four best rarities.

The numbers assume a plain map, an ordinary monster, and no bad luck protection built up yet. All three of those only make your odds better, never worse. There is a section at the end explaining them.

MAW — Regular monsters

the default difficulty

loot	Common	Uncommon	Rare	Epic	Ancient	Primordial	Legendary
------	--------	----------	------	------	---------	------------	-----------

tier	Common	Uncommon	Rare	Epic	Ancient	Primordial	Legendary
0	55.0%	30.0%	15.0%	—	—	—	—
2	54.0%	29.0%	16.0%	0.86%	0.087%	0.030%	0.023%
4	53.0%	28.0%	17.0%	1.71%	0.18%	0.061%	0.047%
6	52.0%	27.0%	18.0%	2.56%	0.27%	0.094%	0.072%
8	51.0%	26.0%	19.0%	3.40%	0.37%	0.13%	0.098%
10	50.0%	25.0%	20.0%	4.23%	0.47%	0.16%	0.12%
12	49.0%	24.0%	21.0%	5.06%	0.58%	0.20%	0.15%
15	47.5%	22.5%	22.5%	6.30%	0.74%	0.26%	0.20%
18	46.0%	21.0%	24.0%	7.52%	0.91%	0.31%	0.24%
20	45.0%	20.0%	25.0%	8.32%	1.03%	0.36%	0.27%
25	42.5%	22.5%	22.5%	10.3%	1.34%	0.46%	0.36%
30+	40.0%	25.0%	20.0%	12.3%	1.67%	0.58%	0.45%

At tier 30 and up: 1 in 37 drops is Ancient or better. A Celestial is 1 in 3,300.

MAW — Bosses

the default difficulty

Road To Insanity	bosses	—	100.0%	100.0%	56.9%	0.72%
Madness	regular	16.0%	60.1%	32.9%	11.4%	0.13%
Madness	bosses	—	100.0%	100.0%	61.9%	0.80%

Moving from MAW to Madness gives you about **four times** as many Ancient or better items from regular monsters, and **three times** as many from bosses.

Bosses

One boss is worth roughly **six regular drops**. Two things make that happen.

A boss never drops a Common. Not at any tier, not on any difficulty. Its roll skips the bottom of the table entirely. On Road To Insanity and Madness, past tier 22 or so, it cannot even drop a Rare — it is always at least an Epic.

A boss has double the chance at the top four rarities. That decides how far up the ladder the item climbs once it is an Epic.

What the tables leave out

Three things make your real odds better than the printed ones.

Big monsters drop better. On top of their loot tier, monsters past roughly level 120 are up to **1.6 times** more likely to give one of the top four rarities. From Doom upward these monsters also spawn in smaller numbers, which is what that bonus is paying for.

Map affixes. On top of the loot tiers they give you, four affixes on one map can more than **double** your chance at the top four rarities.

Bad luck protection. Every drop that fails to give you a Primordial or a Legendary makes the next one a little more likely. Go long enough without one and it becomes almost certain. Celestial has this too, but it builds up so slowly that you should just trust the number in the table.

Two special cases. **Omnipotent** monsters always drop a Celestial. And in **Austerity mode** Legendary and Celestial do not drop at all
